

Medical Gas Supplier Quote Form

Medical Gas is a commodity with no notable differences in quality of gas or in the cylinders where it is stored.

We recommend that you contact medical gas companies in your area and get quotes on the information below. We have found over time that gas companies are competitive, and prices vary across the board. Since all medical gasses and cylinders are the same, we have no preference in which medical gas company you decide to use. We simply recommend that you do your homework and choose the medical gas company that offers the fairest rate and the best service in your practice area.

When obtaining quotes for medical gas, look for pricing of "e-cylinders." We recommend starting with a minimum of four (4) oxygen e-cylinders and three (3) nitrous e-cylinders. You also want to specify "e-cylinders" with no carrying cradles or additional regulators, as the Nitrouseal® system has its own regulator built into the manifold of the flowmeter.

OXYGEN E SIZE: (Cost of Fill)

NITROUS OXIDE: (Cost of Fill)

E-CYLINDER DAILY RENT: \$. Per Cylinder

DELIVERY, FUEL SURCHARGE, **HAZMAT:** \$
